

Gerak Insan Gemilang (GIG) Program

Development of New BIM Modelling Provider

As stated by YB Minister of Works regarding the post-Covid scenario: "The main challenge of adapting to the new norms at construction sites is to ensure that safety and health aspects are given emphasis and reduce dependence on foreign labour through the use of the latest technologies including the Industrialised Building System (IBS) and Building Information Modelling (BIM)"

BIM training is among the most sought after skills training in the construction industry, either in Malaysia or globally. This is because, the worldwide construction industry is moving towards industrialisation through more usage of construction tech and ICT/digitalisation for better quality, productivity and safety.

The opportunity in BIM is very huge in the Malaysian construction industry as it has gradually been made compulsory for development projects, as stated in the Construction Industry Transformation Program that by 2021, submission of building plans for all city-status local authorities will be made in BIM.

More BIM usage will require more BIM Modelling service providers to serve the industry. There is a shortage in BIM personnel in the country. The current COVID pandemic, while providing challenges, including to those in youth category, is also bringing new opportunities due to disruption of supply of foreign personnel.

This training aims to produce new BIM Modelling service providers from the youth category to serve the ever growing construction and house renovation market. The participants will be provided with a BIM Business starter kit that comprises of a full license of TiffinBIM, a Malaysian-brand BIM software by Innovacia, as the affordable solution.

7-day training / Fully sponsored by HRDF* / Business starter kit with software / Allowances

For all: Certificate of Course Attendance. For those who passed test: TiffinBIM BIM Modeler Certificate

Objectives

1. To develop business knowledge and exposure to the vast opportunity available in the construction and housing segments.
2. To provide BIM modelling skills and knowledge
3. To prepare participant from the youth category towards BIM modelling business as a solution to gain for better income in the post-Covid period and beyond.
